R. Rayner, in Pump Users Handbook (Fourth Edition), 1995 Rotary pumps. Rotary pumps make up the second largest group of pumps in terms of numbers. They also represent the second most economical selection, next to centrifugals. Most rotary pumps are self-priming and along with that have the ability to handle fluids consisting of liquids with entrained gas or vapour.

Rotary Pumps - an overview | ScienceDirect Topics

Rotary vane compressors consist of a rotor with a number of blades inserted in radial slots in the rotor. The rotor is mounted offset in a larger housing that is either circular or a more complex shape. As the rotor turns, blades slide in and out of the slots keeping contact with the outer wall of the housing. Thus, a series of increasing and decreasing volumes is created by the rotating blades.

Kinds and units of measurement. Both gas and liquid flow can be measured in physical quantities of kind volumetric or mass flow rates, with units such as liters per second or kilograms per second, respectively. These measurements are related by the material's density. The density of a liquid is almost independent of conditions.
